PARKHURST & WENDEL

Applicant requests reconsideration of the Final Rejection
mailed August 12, 2003 in view of the following remarks.

The continued rejection of claim 1 under 35 USC 102 as
allegedly anticipated by PBR application No. NL PBR CHR3131 in view
of the admission that 'SUNNY ELITE REAGAN' was first offered for
sale in The Netherlands in January 1999 is respectfully traversed.

Serial No. 09/902,749

Applicant relies upon the arguments presented in the Amendment Under 37 CFR 1.111 filed May 27, 2003 and the following comments and arguments.

Applicant informs the Examiner that the usual grace period in UPOV countries, with the exception of the United States, is four years rather than one year. There is a sound reason for a grace period of such length.

The trade of ornamentals, e.g., chrysanthemums, has become an international activity, part of which includes worldwide trials of new varieties that were usually bred under specific conditions in one region. Several trials in different seasons are needed to determine whether a new variety is suitable for production in a foreign region and whether the new variety fulfills consumer expectation in, for example, the United States. Due to the considerable costs to obtain U.S. plant patents, foreign breeders usually apply for patents in those instances where both criteria discussed above are positive. However, all the work required sometimes cannot be done within a year after the first sale in the original region. A grace period of four years is much more

realistic and is also the period commonly accepted for the application of Plant Breeders Rights in other UPOV countries.

While applicant realizes that plant protection in the United States is different from the plant protection afforded in other UPOV countries in that the United States uses a legal (patent) system rather than a Plant Breeders Right approach, one should take into consideration the common purpose of both systems, namely the protection of the right of the breeder of his or her product. For the international community of breeders, it would be useful if the grace period in the United States comported with that of other UPOV countries.

Further, applicant responds to the Response to Arguments appearing at pages 2 to 5 of the Final Rejection thusly.

The published PBR application, while a printed publication, does not constitute prior art under 35 USC 102 because the publication by the USPTO's own admission is not enabling. If the publication is not enabling, it does not qualify as prior art under 35 USC 102. The reference alone cannot be a proper basis for rejection here.

Serial No. 09/902,749

Sales abroad also are not prior art within the definition of 35 USC 102 (as they are not patent-defeating acts) and the combination of two non-prior art events, regardless of the degree of sophistry involved, does not make a proper rejection under 35 USC 102.

Applicant also respectfully submits that the holding in In re LeGrice supports patentability here and the PBR document is not prior art for the reasons given above.

Applicant also respectfully points out that the panel in Ex parte Thomson itself distinguished the facts before it from that of In re LeGrice and neither decision provides proper support for the USPTO position here.

Serial No. 09/902,749

Reconsideration of the rejection is earnestly solicited.

Respectfully submitted,

PARKHURST & WENDEL, L.L.P.
